### eco²sy® layering system

eco²sy® is a multi-layers insulation which uses recycled plastic bottles and spent coffee grounds to create an insulation that provides breathability, wind and water resistance, compressibility, odor control and thermally efficiency.

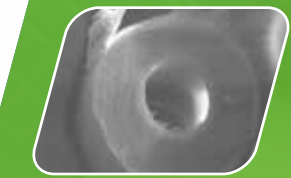

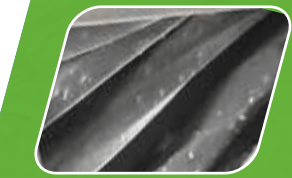

With all these wonderful qualities, there's no better earth-smart choice than the eco²sy® jacket you're now wearing!

### eco²sy® features

- Keep you Warm**  
Made from recycled fibers, eco²sy® functions just like real down feathers.
- Wind-Resistant**  
With its unique multi-layering insulation, eco²sy® provides great protection from chilly winds.
- Odor Control**  
Thanks to the coffee grounds in each fiber, eco²sy® provides 10X better odor control performance than ordinary fabrics.
- Lightweight & Compressibility**  
eco²sy® is lightweight and extremely compressible, with a surprisingly high warmth to weight ratio.
- Sustainable Technology**  
With a large proportion of waste PET bottles and coffee grounds in its materials, eco²sy® represents a sustainable technology that aims to build a better future.

### Sustainable Technology

**Sustainable Insulation**  
60 & 100g/m²  
Lightweight and thermal efficiency.

145 & 200g/m²  
Excellent thermal efficiency performance for outdoor activities in winter.

**Better hand Feel & Recycled Fiber**  
eco²sy life™ provides great thermal insulation to your daily life with S.Café® and UNIFI's REPVE® recycled polyester fibers.

40 & 60 & 100g/m²  
Lightweight and thermal efficiency.

145 & 200g/m²  
Excellent thermal efficiency performance for outdoor activities in winter.
